SOFTWARE ENGINEER IN TEST

TECHNICAL TEST

General Questions

1. Can you tell us about your passion?

   As a software Tester, I'm passionate about creating Test beautiful, efficient digital products to make user experience with technology memorable. One of the things I liked about my last job was making digital transformations from manual tests to automation tests API .from the results of making automation tests for months that we have been working on getting positive results.one of the reasons I was so excited to apply for this role.

2. What is your goal as a Software Engineer in Test?

   My goal as a software tester is to assess product quality and provide a real picture to stakeholders and ensure that the tested application is suitable for use by customers, because the tester is the first user before being published to customers

3. If you join with Warung Pintar as a **Software Engineer in Test**, what is your expectation?

   What I hope is that we can learn and grow together, because from the beginning I focused on Backend Tester, I wanted to learn Web Testing or End to End testing, both wanted to work in the startup world which is definitely different from corporate and building new relation, improve my technology and business knowledge, better career of course
